Tesla

TSLA • NASDAQ Global Select • Auto - Manufacturers • United States

COMPANY PROFILE

Tesla designs, manufactures and sells electric vehicles, energy-storage systems, charging products and related software. Its automotive operations include vehicle sales, leasing, services and driver-assistance subscriptions, while the energy business supplies utility-scale and residential storage. The company is also investing in autonomous mobility, artificial-intelligence infrastructure, semiconductors and humanoid robotics.

RESEARCH SNAPSHOT

02 The call, the math, and the three reasons why

A one-page summary of the recommendation and the evidence behind it; the following pages provide the detail.

RECOMMENDATION	TARGET PRICE	CURRENT PRICE	IMPLIED UPSIDE
SELL	**109.50 USD**	**339.99 USD**	**−67.8%**
12-month horizon	12-month fundamental	as of report date	vs. current price

MARKET CAP	ENTERPRISE VALUE	P/E · EV/EBITDA 2026E	FCF · DIV YIELD 2026E
USD 1,270 bn	**USD 1,277.2 bn**	**267.9× · 76.9×**	**-0.4% · —**
shares × price	mcap + EV adjustments	history + peers, see p. 18–19	

01 The price requires software economics

The reverse valuation needs FY2027E EBIT of USD 45.5bn against the followed estimate of USD 6.9bn. Vehicle manufacturing alone cannot close that gap at current margins.

`36.0% implied FY2027E EBIT margin`

02 Automotive competition is tightening

BYD exceeded Tesla's Q2 2026 BEV deliveries, while Tesla's H1 2026 China NEV retail share was only 5.1%. Price and product competition constrain the cash engine funding AI investment.

`480,126 Tesla Q2 deliveries`

03 Energy is real but insufficient alone

Energy produced 22.2% of FY2025 reported gross profit from 13.5% of group revenue. Even a premium valuation for storage cannot reconcile the full enterprise value.

`29.8% FY2025 gross margin`

THESIS BREAKER

The SELL thesis breaks if autonomy and FSD create more than USD 20bn of sustainable annual EBIT while vehicle and energy economics remain intact.

SHARE PRICE DEVELOPMENT

Price trajectory and valuation anchors

03

Weekly closing prices over 36 months with the 12-month target price, alongside key market data.

Share price — last 36 months

USD per share, with 12-month target line

CURRENT PRICE **339.99 USD** 14 August 2026	TARGET PRICE **109.50 USD** 12-month	IMPLIED UPSIDE **−67.8%** vs. current	52-WEEK HIGH **498.83 USD** past 12m
52-WEEK LOW **297.38 USD** past 12m	1-YEAR CHANGE **+1.3%** price only	3-YEAR CHANGE **+41.7%** price only	REPORT DATE **14 August 2026**

READING THE MOVE

The evidence supports a valuation sustained by AI and autonomy expectations despite weak near-term profitability. Q2 2026 revenue reached USD 28.24bn, but the EBIT margin fell to 1.4%; management also raised 2026 capital expenditure to about USD 25bn. Regulatory progress in Texas and the EU review support optionality, while competitive pressure in China works against it. The USD 109.50 target reflects materially lower option value than the current quote.

VALUE BREAKDOWN · PART 1

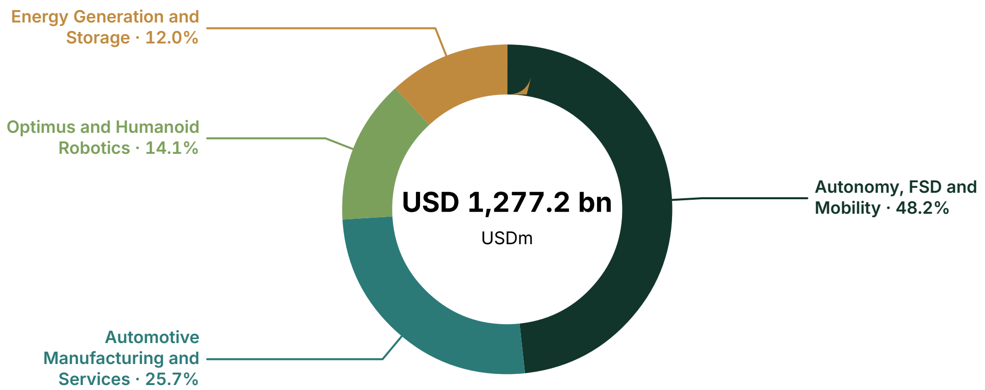
Enterprise-value allocation by business division

04

Where the market value sits across current businesses and long-term strategic options.

Enterprise value by business division

USD millions · current analytical allocation



VALUE AND EARNINGS BY BUSINESS DIVISION

Analytical enterprise-value allocation against reported economics. “Reported” rows match a verified company-reported segment; “Modelled allocation” rows are model-side splits. This issuer discloses segment gross profit but not segment EBIT, so the absolute profit column is verified gross profit while the share column is the model’s estimate of each division’s share of group EBIT. Business divisions may differ from company-reported accounting segments.

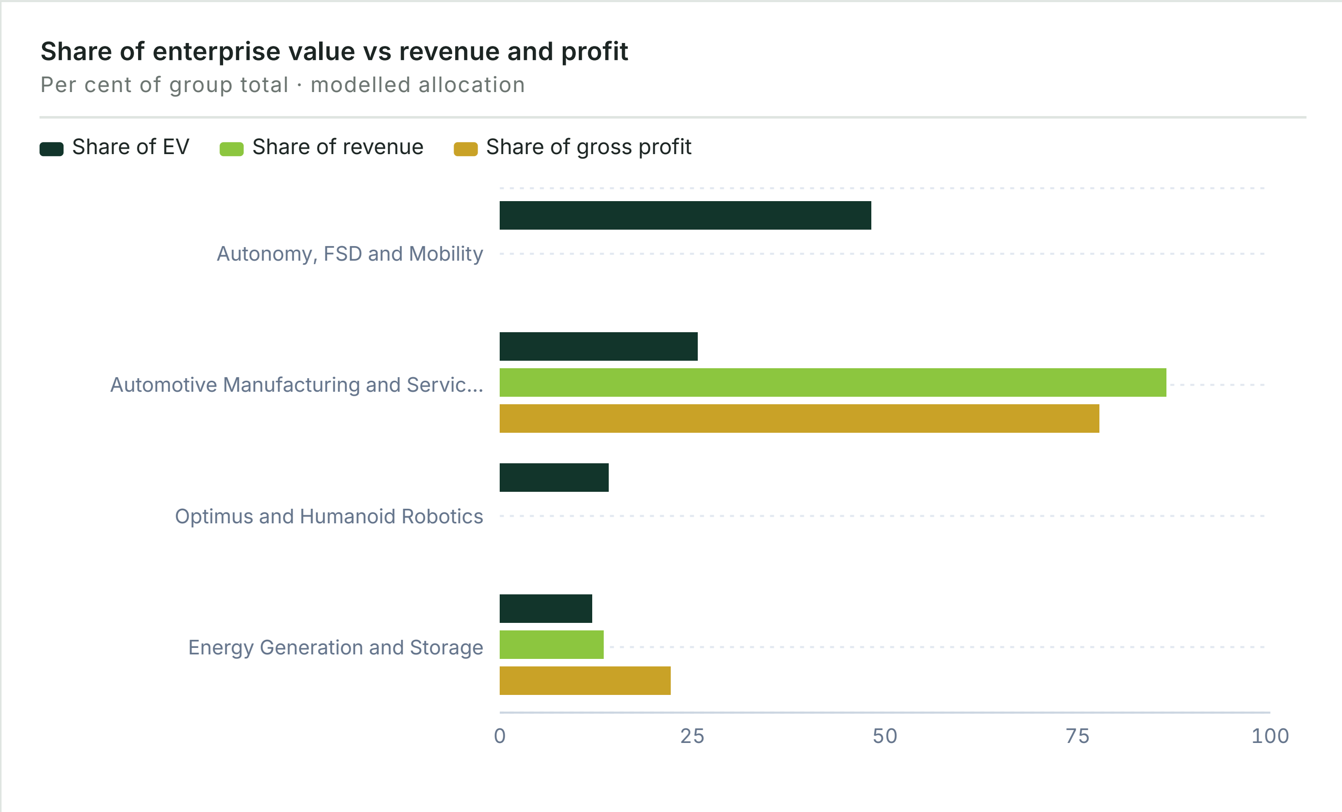
	EV	EV %	REVENUE	REV %	GROSS PROFIT	EBIT SHARE OF TOTAL (EST.)	BASIS
Autonomy, FSD and Mobility	615,384	48.2%	0	0.0%	0	0.0%	Modelled allocation
Automotive Manufacturing and Services	328,224	25.7%	82,056	86.5%	13,292	75.0%	Reported
Optimus and Humanoid Robotics	180,386	14.1%	0	0.0%	0	0.0%	Modelled allocation
Energy Generation and Storage	153,252	12.0%	12,771	13.5%	3,802	25.0%	Reported
Total	**1,277,246**	**100.0%**	**94,827**	**100.0%**	**17,094**	**100.0%**	

VALUE BREAKDOWN · PART 2

Where value sits versus where money is earned

05

Each business division's share of enterprise value against its share of group revenue and profit. A division holding value it does not yet earn is where the valuation rests on the future; the full figures are in the allocation table on the previous page.



INTERPRETATION

Only 37.7% of the analytical enterprise-value allocation rests on businesses with separately reported FY2025 revenue and gross profit; the remainder is assigned to autonomy and robotics options. Automotive and energy therefore provide the auditable operating floor, while nearly two-thirds of current EV requires future economics that are not visible in reported segment profit.

RECOMMENDATION

Why we land on the call we do

06

How the assembled evidence adds up to the call: what the price assumes, what the clues say, and what would change our view. The decision summary and the three headline reasons are on the snapshot page.

SELL. The 12-month target price is USD 109.5, implying 67.8% downside from the current price of USD 339.99.

The market is not valuing Tesla principally on near-term vehicle earnings. The reverse valuation requires FY2027E EBIT of USD 45.5bn and a 36.0% margin, versus the followed model's USD 6.9bn and 5.5%. By 2035, the market-implied case requires a 43.2% EBIT margin, implying that software, autonomy and robotics must become the dominant sources of profit while automotive manufacturing and energy continue funding the investment cycle.

Evidence is mixed rather than uniformly negative. Tesla delivered 480,126 vehicles in Q2 2026, according to INDmoney/SNE Research on 12 August 2026, but BYD delivered 557,090 in the same period. Tesla had 1.48m active FSD subscriptions at Q2 2026, according to Investing.com on 13 August 2026, while its estimated share of active US robotaxi users remained about 6% in H1 2026, according to Apptopia via CleanTechnica on 8 July 2026. Energy is stronger: FY2025 revenue was USD 12.8bn and reported gross profit was USD 3.8bn.

The strongest argument against the SELL call is that the model treats Tesla's option portfolio too conventionally. A subscription fleet can scale software without matching vehicle-volume growth, Texas provides a route to commercial driverless deployment, and internal Optimus use can validate products before external sales. Those possibilities justify multiples above automobile peers, but they do not yet justify the market-implied leap from 5.5% followed EBIT margin in FY2027E to 36.0%.

The call would improve if unsupervised service gains durable permits, robotaxi usage moves materially above the reported 6% share, and recurring software revenue drives consolidated EBIT toward USD 20bn without extending cash burn. It would deteriorate further if China share remains near 5%, energy margin fails to recover from the Q2 2026 warranty impact, or annual capital expenditure above USD 25bn fails to create measurable software and robotics revenue.

CORE ANALYSIS · EXECUTIVE MAP

07 How the company creates economic value

The framework underlying the business division deep dives that follow.

Enterprise value forms in four places. Autonomy, FSD and Mobility receives USD 615.384bn because recurring software and robotaxi economics are the only credible path to the reverse valuation's 36.0% FY2027E EBIT margin. Automotive receives USD 328.224bn and must protect the installed base and cash engine. Optimus receives USD 180.386bn as a long-duration pre-revenue option. Energy receives USD 153.252bn on demonstrated growth and superior gross margin.

The one number that matters for autonomy is the gap between 6% estimated US active robotaxi-user share and the scale required to produce tens of billions of EBIT. For automotive it is the 16.2% FY2025 reported gross margin. For energy it is whether gross margin recovers from 20.4% in Q2 2026 toward 29.8% in FY2025. For Optimus it is verified external commercial volume rather than internal deployment.

ANALYTICAL ANCHOR

The reported segments establish the earnings floor; the analytical divisions explain the valuation premium. They must not be confused: autonomy and Optimus are modelled business divisions, not separately reported segments.

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.1 Autonomy, FSD and Mobility

Business division deep dive — Emerging option.

WHY THE MARKET VALUES IT AUTONOMY IS THE LARGEST ANALYTICAL BUSINESS DIVISION BECAUSE IT OFFERS A ROUTE FROM CYCLICAL HARDWARE GROSS PROFIT TO RECURRING SOFTWARE AND NETWORK ECONOMICS. THE USD 615.384BN CURRENT-EV ALLOCATION IS AN INTERPRETIVE ALLOCATION, NOT A REPORTED SEGMENT VALUE: IT APPLIES 350.0X TO THE USD 1.758BN ANNUALIZED RUN-RATE OBTAINED FROM 1.48M SUBSCRIPTIONS AT USD 99 PER MONTH. THE EXTREME MULTIPLE MAKES THE DEPENDENCE ON FUTURE ROBOTAXI AND SOFTWARE PROFIT EXPLICIT.

MARKET STRUCTURE AND DEMAND PERSONAL OWNERSHIP AND SUBSCRIPTION-BASED ADAS REPRESENTED 74.35% OF THE DRIVERLESS-CAR MARKET IN 2025, ACCORDING TO MORDOR INTELLIGENCE ON 26 MAY 2026. THAT STRUCTURE FAVORS TESLA'S INSTALLED-FLEET APPROACH, BUT PAID AUTONOMOUS MOBILITY ALREADY HAS SCALED OPERATORS. WAYMO REACHED 500,000 PAID TRIPS PER WEEK ACROSS TEN US CITIES IN MARCH 2026, ACCORDING TO SQ MAGAZINE ON 23 JULY 2026, WHILE APOLLO GO COMPLETED 3.4M TRIPS IN Q4 2025.

COMPETITIVE POSITION - TESLA HAD ABOUT 6% OF ACTIVE US ROBOTAXI USERS IN H1 2026, ACCORDING TO APPTOPIA VIA CLEANTECHNICA ON 8 JULY 2026. - WAYMO HAD 69% OF ACTIVE US ROBOTAXI USERS IN JUNE 2026, DOWN FROM 79% IN JANUARY, ACCORDING TO THE SAME SOURCE. - ZOOX REACHED 25% OF ACTIVE US ROBOTAXI USERS IN JUNE 2026, ACCORDING TO THE SAME SOURCE. - WAYMO HELD AN ESTIMATED 14.4% SHARE OF AUTONOMOUS-DRIVING SOFTWARE IN 2025, ACCORDING TO GLOBAL MARKET INSIGHTS ON 15 APRIL 2026.

UNIT ECONOMICS TESLA'S STATED CYBERCAB COST OBJECTIVES CONFLICT AT USD 0.20 PER MILE FROM TESLARATI ON 22 JANUARY 2026 AND USD 0.18 FROM SDVGURU ON 5 JANUARY 2026. THE REPORT WEIGHTS USD 0.20 BECAUSE IT IS DESCRIBED AS FULLY CONSIDERED AND EXPLICITLY INCLUDES ENERGY, MAINTENANCE, CLEANING, DEPRECIATION AND INSURANCE. ARK'S CONSUMER-COST ESTIMATE WAS USD 0.25 PER MILE, REPORTED BY INVESTING.COM ON 4 FEBRUARY 2025, INDICATING THAT TESLA'S TARGET LEAVES LITTLE ROOM FOR NETWORK OVERHEAD UNLESS UTILIZATION IS VERY HIGH.

AUTONOMY, FSD AND MOBILITY FACT SHEET

EMERGING OPTION

REVENUE	Not separately reported
GROSS PROFIT	Not separately reported
ACTIVE FSD SUBSCRIPTIONS	1.48m at Q2 2026
SUBSCRIPTION PRICE	$99/month
ANNUALIZED SUBSCRIPTION RUN-RATE	$1.76bn
CURRENT EV ALLOCATION BASIS	$1.76bn × 350.0x
US ACTIVE ROBOTAXI-USER SHARE	About 6% in H1 2026
PAID PILOT MILEAGE	1.7m cumulative at Q1 2026
PERMISSION CASCADE	Texas licensed; California pending
NEXT REGULATORY GATE	EU RDW review targeted Oct. 2026

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.1 Autonomy, FSD and Mobility (continued)

Business division deep dive — Emerging option.

ECONOMICS BRIDGE THE SUBSCRIPTION BUSINESS BEGINS WITH 1.48M USERS AT USD 99 PER MONTH, OR USD 1.758BN ANNUALIZED BEFORE CHURN, TAXES AND DISCOUNTS. THE CURRENT ALLOCATION THEREFORE NEEDS EITHER MANY TIMES THE PRESENT USER BASE, A SUBSTANTIAL ROBOTAXI REVENUE STREAM, OR BOTH. A 2028 ANALYTICAL EBIT CONTRIBUTION OF USD 2.0BN IS INCLUDED IN THE DIVISION BRIDGE, BUT EVEN THAT WOULD REPRESENT ONLY ONE-FIFTH OF FOLLOWED GROUP EBIT AND CANNOT INDEPENDENTLY SUPPORT THE CURRENT ALLOCATION.

GAP TO REQUIRED ECONOMICS THE REVERSE VALUATION REQUIRES CONSOLIDATED FY2027E EBIT OF USD 45.476BN VERSUS USD 6.890BN IN THE FOLLOWED MODEL. AUTONOMY MUST SUPPLY MUCH OF THE USD 38.586BN GAP BECAUSE NEITHER AUTOMOTIVE NOR ENERGY CURRENTLY EXHIBITS A 36.0% CONSOLIDATED MARGIN STRUCTURE. THE SAFETY EVIDENCE IS ALSO NOT DIRECTLY COMPARABLE: TESLA REPORTED 5.3M SUPERVISED MILES PER MAJOR COLLISION IN Q1 2026, WHILE WAYMO REPORTED 63,415 TESTING MILES PER DISENGAGEMENT FOR DECEMBER 2024 TO NOVEMBER 2025.

AUTONOMY, FSD AND MOBILITY FACT SHEET

EMERGING OPTION

REVENUE	Not separately reported
GROSS PROFIT	Not separately reported
ACTIVE FSD SUBSCRIPTIONS	1.48m at Q2 2026
SUBSCRIPTION PRICE	$99/month
ANNUALIZED SUBSCRIPTION RUN-RATE	$1.76bn
CURRENT EV ALLOCATION BASIS	$1.76bn × 350.0x
US ACTIVE ROBOTAXI-USER SHARE	About 6% in H1 2026
PAID PILOT MILEAGE	1.7m cumulative at Q1 2026
PERMISSION CASCADE	Texas licensed; California pending
NEXT REGULATORY GATE	EU RDW review targeted Oct. 2026

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.1 Autonomy, FSD and Mobility (continued)

Business division deep dive — Emerging option.

REGULATORY STATE - TEXAS: TESLA ROBOTAXI LLC HELD A STATEWIDE TNC LICENSE THROUGH 6 AUGUST 2026; LEVEL 4 OR 5 VEHICLES ALSO REQUIRE COMMERCIAL AUTHORIZATION FROM TXDMV, EFFECTIVE 28 MAY 2026. - CALIFORNIA: TESLA WAS CLASSIFIED AS A TCP LIMOUSINE SERVICE ON 25 MARCH 2026; CONFIRMATION OF A DRIVERLESS DEPLOYMENT PERMIT IS NOT AVAILABLE IN THE SOURCE DATA. - FLORIDA: FULLY AUTONOMOUS VEHICLES MAY OPERATE WITHOUT A HUMAN DRIVER, BUT ON-DEMAND NETWORKS REQUIRE USD 1.0M PRIMARY LIABILITY INSURANCE. - EUROPE: REUTERS REPORTED ON 12 AUGUST 2026 THAT DUTCH REGULATOR RDW TARGETED COMPLETION OF ITS FSD REVIEW IN OCTOBER 2026, POTENTIALLY ENABLING EU-WIDE APPROVAL.

MILESTONES AND SIGNAL MAP THE POSITIVE SEQUENCE IS PERMIT EXPANSION, RISING PAID MILES, HIGHER FSD SUBSCRIPTIONS AND EVIDENCE THAT INTERVENTION RATES IMPROVE WITHOUT REMOTE-SUPPORT INTENSITY. THE NEGATIVE SEQUENCE IS CONTINUED CLASSIFICATION AS SUPERVISED OR LIMOUSINE SERVICE, FLAT USER SHARE, ADVERSE-WEATHER LIMITATIONS AND HIGHER INSURANCE REQUIREMENTS. CALIFORNIA'S USD 5.0M PROOF-OF-FINANCIAL-RESPONSIBILITY REQUIREMENT IS MANAGEABLE FINANCIALLY, BUT PERMISSION AND LIABILITY STANDARDS CAN SLOW REPLICATION.

ASSESSMENT AUTONOMY MERITS SUBSTANTIAL OPTION VALUE BECAUSE TESLA COMBINES A LARGE VEHICLE FLEET, RECURRING SUBSCRIPTIONS AND PROPRIETARY COMPUTE. IT DOES NOT YET MERIT TREATMENT AS A PROVEN NETWORK MONOPOLY. THE DECISIVE EVIDENCE WOULD BE UNSUPERVISED COMMERCIAL AUTHORIZATION, STANDARDIZED INTERVENTION DATA, DISCLOSED TRIPS PER VEHICLE AND AN OPERATING-MARGIN BRIDGE. THOSE OPERATING MARGINS AND UTILIZATION RATES ARE NOT AVAILABLE IN THE SOURCE DATA.

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.2 Automotive Manufacturing and Services

Business division deep dive — Profit engine.

WHY THE MARKET VALUES IT AUTOMOTIVE REMAINS THE CASH AND DISTRIBUTION ENGINE EVEN THOUGH IT REPRESENTS ONLY 25.7% OF THE ANALYTICAL EV ALLOCATION. THE DIVISION GENERATED FY2025 EXTERNAL SALES OF USD 82.056BN AND REPORTED GROSS PROFIT OF USD 13.292BN, EXACTLY AS DISCLOSED IN TESLA'S FY2025 FORM 10-K. THE USD 328.224BN ALLOCATION APPLIES 4.0X TO REVENUE, ABOVE TOYOTA'S FY2026E 0.5X EV/SALES BUT BELOW AN AI-PLATFORM VALUATION.

MARKET STRUCTURE AND DEMAND TESLA HELD AN ESTIMATED 13% OF THE GLOBAL PASSENGER BEV MARKET IN Q1 2026, WHILE BYD HELD 11% AND GEELY 10%, ACCORDING TO COUNTERPOINT RESEARCH ON 28 MAY 2026. THE QUARTERLY VOLUME PICTURE SUBSEQUENTLY SHIFTED: BYD DELIVERED 557,090 BEVS IN Q2 2026 AGAINST TESLA'S 480,126, ACCORDING TO INDMONEY/BLOOMBERG AND INDMONEY/SNE RESEARCH ON 12 AUGUST 2026.

COMPETITIVE POSITION - TESLA HELD 60% OF NEW US EV REGISTRATIONS IN JUNE 2026, ACCORDING TO MOBILITY GLOBAL/JALOPNIK ON 14 AUGUST 2026. - TESLA'S CHINA NEV RETAIL SHARE WAS 5.1% IN H1 2026 VERSUS BYD'S 21.1%, ACCORDING TO INDMONEY ON 12 AUGUST 2026. - TESLA SOLD 27,249 VEHICLES IN CHINA IN JULY 2026 AND FELL OUTSIDE THE TOP TEN, ACCORDING TO CNEVPOST ON 13 AUGUST 2026. - BYD HELD 23.5% OF CHINA'S NEV RETAIL MARKET IN JULY 2026, ACCORDING TO CPCA ON 13 AUGUST 2026.

UNIT ECONOMICS FY2025 REPORTED AUTOMOTIVE GROSS PROFIT DIVIDED BY EXTERNAL SALES GIVES A 16.2% GROSS MARGIN. TESLA'S OVERALL Q2 2026 GROSS MARGIN WAS 16.83%, ACCORDING TO SEEKING ALPHA VIA PLUANG ON 7 AUGUST 2026, BELOW BYD'S ESTIMATED 18.8% REPORTED BY STERLING ON 14 AUGUST 2026. XIAOMI'S SU7 HAD ALREADY REACHED A 20.4% GROSS MARGIN IN Q3 2024, ACCORDING TO XIAOMI GLOBAL ON 18 NOVEMBER 2024, ILLUSTRATING THE SPEED AT WHICH CHINESE ENTRANTS CAN IMPROVE.

COST BRIDGE TESLA TARGETS A 50% REDUCTION IN NEXT-GENERATION PLATFORM PRODUCTION COSTS VERSUS MODEL 3 AND MODEL Y, ACCORDING TO FLEETSAUCE ON 17 APRIL 2025. EXTERNAL ESTIMATES CONFLICT BETWEEN USD 16,000 PER VEHICLE FROM TORQUE NEWS AND APPROXIMATELY USD 20,000 FROM GOOD REBELS ON 12 AUGUST 2026. THE REPORT WEIGHTS THE USD 20,000 FIGURE BECAUSE IT IS MORE RECENT, WHILE TREATING NEITHER AS ACHIEVED COST. A 48-VOLT ARCHITECTURE COULD SAVE AN ESTIMATED USD 320 PER VEHICLE THROUGH LOWER COPPER CONTENT.

AUTOMOTIVE MANUFACTURING AND SERVICES FACT SHEET

PROFIT ENGINE

FY2025A REVENUE	USD 82,056m
FY2025A GROSS PROFIT	USD 13,292m
FY2025 REPORTED GROSS MARGIN	16.2%
CURRENT EV ALLOCATION BASIS	$82.06bn × 4.0x revenue
Q2 2026 DELIVERIES	480,126 vehicles
GLOBAL BEV SHARE	13% in Q1 2026
CHINA NEV RETAIL SHARE	5.1% in H1 2026
INSTALLED ANNUAL CAPACITY	2.35m vehicles in 2024
AI4 HARDWARE COST ESTIMATE	$1,400-$2,800 per vehicle
NEXT-PLATFORM COST OBJECTIVE	50% below Model 3/Y

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.2 Automotive Manufacturing and Services (continued)

Business division deep dive — Profit engine.

GAP TO REQUIRED ECONOMICS THE FOLLOWED MODEL EXPECTS CONSOLIDATED EBIT MARGINS OF 5.4% IN FY2026E AND 5.5% IN FY2027E. TOYOTA'S FY2027E EBIT MARGIN IS 11.3%, SHOWING THAT MANUFACTURING CAN IMPROVE MATERIALLY, BUT AN AUTOMOBILE MARGIN CANNOT EXPLAIN THE REVERSE VALUATION'S 36.0% CONSOLIDATED FY2027E REQUIREMENT. TESLA THEREFORE NEEDS AUTOMOTIVE TO PRESERVE VOLUME AND GROSS PROFIT WHILE SOFTWARE SUPPLIES THE INCREMENTAL MARGIN.

CAPACITY AND CAPITAL INTENSITY TESLA HAD ESTIMATED ANNUAL PRODUCTION CAPACITY OF 2.35M VEHICLES IN 2024, INCLUDING 950,000 IN SHANGHAI AND 650,000 IN FREMONT, ACCORDING TO INOVEV ON 21 MAY 2024. EXACT Q2 2026 UTILIZATION FOR TEXAS AND BERLIN IS NOT AVAILABLE IN THE SOURCE DATA. SEMI HIGH-VOLUME PRODUCTION REPORTEDLY BEGAN IN APRIL 2026 WITH 50,000 UNITS OF ANNUAL CAPACITY, BUT RAMP ECONOMICS AND REALIZED DEMAND ARE NOT DISCLOSED.

MILESTONES AND SIGNAL MAP POSITIVE SIGNALS ARE SUSTAINED DELIVERIES NEAR Q2 LEVELS, GROSS-MARGIN RECOVERY, LOWER COMMODITY INPUTS AND PROOF THAT THE NEXT-GENERATION PLATFORM REACHES ITS COST TARGET. LITHIUM CARBONATE WAS USD 18,160 PER TONNE ON 10 AUGUST 2026, WHILE FITCH AND GOLDMAN SACHS FORECAST USD 15,000 AND USD 15,646 RESPECTIVELY FOR 2027. NICKEL WAS USD 16,681 PER TONNE ON 14 AUGUST 2026, VERSUS 2027 FORECASTS OF USD 15,000 FROM FITCH AND USD 16,000 FROM THE WORLD BANK.

ASSESSMENT AUTOMOTIVE DESERVES A PREMIUM TO TRADITIONAL MANUFACTURING BECAUSE IT SUPPLIES THE INSTALLED BASE FOR SOFTWARE AND BENEFITS FROM BRAND, CHARGING AND VERTICAL INTEGRATION. THE PREMIUM SHOULD NEVERTHELESS BE BOUNDED BY VISIBLE GROSS PROFIT, REINVESTMENT REQUIREMENTS AND COMPETITIVE SHARE. A 4.0X REVENUE ALLOCATION IS ALREADY GENEROUS RELATIVE TO TOYOTA AND ASSUMES THAT CURRENT US STRENGTH OFFSETS CHINA WEAKNESS.

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.3 Optimus and Humanoid Robotics

Business division deep dive — Pre revenue option.

WHY THE MARKET VALUES IT OPTIMUS IS A PRE-REVENUE OPTION ON APPLYING TESLA'S PERCEPTION, INFERENCE, ACTUATOR AND MANUFACTURING CAPABILITIES OUTSIDE VEHICLES. THE USD 180.386BN CURRENT-EV ALLOCATION IS A RESIDUAL ANALYTICAL ALLOCATION CROSS-CHECKED AT 4.63 TIMES FIGURE AI'S REPORTED USD 39BN 2025 POST-MONEY VALUATION. IT IS NOT A REPORTED TESLA SEGMENT VALUE AND CARRIES THE WIDEST VALUATION RANGE.

MARKET STRUCTURE AND DEMAND ASIA PACIFIC REPRESENTED AN ESTIMATED 42.6% OF HUMANOID-ROBOT MARKET VALUE IN 2025, ACCORDING TO FORTUNE BUSINESS INSIGHTS ON 27 JULY 2026, WHILE NORTH AMERICA REPRESENTED AN ESTIMATED 8% IN 2026, ACCORDING TO PERSISTENCE MARKET RESEARCH ON 8 APRIL 2026. CHINESE MANUFACTURERS ACCOUNTED FOR NEARLY 90% OF 2025 GLOBAL SHIPMENTS, ACCORDING TO VISUAL CAPITALIST ON 17 MARCH 2026.

COMPETITIVE POSITION - AGIBOT HELD 44% OF GLOBAL HUMANOID SHIPMENTS IN H1 2026, ACCORDING TO SMART ANALYTICS GLOBAL ON 10 AUGUST 2026. - UNITREE HELD 31% IN H1 2026, ACCORDING TO THE SAME SOURCE. - UBTECH DELIVERED 1,079 WALKER S INDUSTRIAL ROBOTS DURING 2025, ACCORDING TO UBTECH ON 1 APRIL 2026. - TESLA, FIGURE AND AGILITY EACH SHIPPED ABOUT 150 UNITS IN 2025, ACCORDING TO VISUAL CAPITALIST ON 17 MARCH 2026.

UNIT ECONOMICS AND ECONOMICS BRIDGE SPECIFIC TESLA OPTIMUS COST AND EXTERNAL SELLING PRICE ARE NOT AVAILABLE IN THE SOURCE DATA. INTERNAL DEPLOYMENT ABOVE 1,000 UNITS AT Q2 2026 WAS REPORTED BY ROBOTOMATED ON 3 APRIL 2026, FOCUSED ON BATTERY-CELL SORTING AND PARTS KITTING. INTERNAL USE CAN ESTABLISH LABOR SAVINGS AND RELIABILITY, BUT IT DOES NOT PROVE EXTERNAL GROSS MARGIN OR CUSTOMER WILLINGNESS TO PAY.

GAP TO REQUIRED ECONOMICS A USD 180.386BN ALLOCATION IS MORE THAN FOUR TIMES THE CITED USD 39BN FIGURE AI VALUATION AND VASTLY ABOVE FIGURE'S OLDER USD 2.6BN 2024 SERIES B VALUE. THE DATES RESOLVE RATHER THAN ELIMINATE THE CONFLICT: THE REPORT USES THE LATER 2025 FINANCING VALUE BUT RECOGNIZES ITS PRIVATE-MARKET CHARACTER. THE ANALYTICAL 2028 EBIT CONTRIBUTION IS ONLY USD 0.5BN, LEAVING MOST VALUE DEPENDENT ON POST-2028 SCALE.

OPTIMUS AND HUMANOID ROBOTICS FACT SHEET

PRE REVENUE OPTION

GROSS PROFIT	Not separately reported
CURRENT EV ALLOCATION BASIS	4.63× Figure's $39bn valuation
INTERNAL DEPLOYMENT INDICATION	Over 1,000 units at Q2 2026
TESLA 2025 SHIPMENTS	About 150 units
AGIBOT SHIPMENT SHARE	44% in H1 2026
UNITREE SHIPMENT SHARE	31% in H1 2026
CHINA MANUFACTURER SHARE	Nearly 90% in 2025
PRODUCTION MILESTONE	Fremont start delayed in Jul. 2026

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.3 Optimus and Humanoid Robotics (continued)

Business division deep dive — Pre revenue option.

MILESTONES AND SIGNAL MAP TESLA DELAYED ITS TARGETED FREMONT PRODUCTION START FROM AUGUST 2026 TO LATER IN THE YEAR, ACCORDING TO TESERY ON 22 JULY 2026. THE NEXT INVESTABLE MILESTONES ARE PRODUCTION COMMENCEMENT, INDEPENDENTLY VERIFIABLE UNITS DEPLOYED, TASK-LEVEL UPTIME, LABOR-HOUR SAVINGS, EXTERNAL PRICING AND EXTERNAL CUSTOMER ORDERS. MISSING ONE DATE IS MANAGEABLE; REPEATED DELAYS COMBINED WITH ABSENT UNIT ECONOMICS WOULD IMPAIR THE OPTION VALUE.

ASSESSMENT OPTIMUS MAY ULTIMATELY ADDRESS A LARGE LABOR MARKET, BUT AVAILABLE EVIDENCE DESCRIBES AN EARLY INDUSTRIAL PILOT FACING ESTABLISHED CHINESE SHIPMENT LEADERS. THE ALLOCATION IS THEREFORE A HIGH-DURATION OPTION RATHER THAN CAPITALIZED CURRENT EARNINGS. IT IS THE FIRST POOL THAT SHOULD BE REDUCED IF CAPITAL EXPENDITURE RISES WITHOUT DISCLOSED DEPLOYMENT PRODUCTIVITY.

OPTIMUS AND HUMANOID ROBOTICS FACT SHEET

PRE REVENUE OPTION

REVENUE	Not separately reported
GROSS PROFIT	Not separately reported

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.4 Energy Generation and Storage

Business division deep dive — Growth profit engine.

WHY THE MARKET VALUES IT ENERGY IS TESLA'S CLEAREST NON-AUTOMOTIVE PROFIT ENGINE. FY2025 EXTERNAL SALES WERE USD 12.771BN AND REPORTED GROSS PROFIT WAS USD 3.802BN, GIVING A 29.8% GROSS MARGIN AND 22.2% OF GROUP GROSS PROFIT FROM 13.5% OF REVENUE. THE USD 153.252BN ALLOCATION APPLIES 12.0X REVENUE, A PREMIUM REFLECTING GROWTH, DOMESTIC CAPACITY AND STORAGE MARGINS.

MARKET STRUCTURE AND DEMAND TESLA DEPLOYED A RECORD 46.7 GWH IN 2025, ACCORDING TO RENEWABLES NOW ON 4 FEBRUARY 2026. BENCHMARK MINERAL INTELLIGENCE REPORTED THAT BYD OVERTOOK TESLA IN 2025 WITH A 13% GLOBAL BESS-INTEGRATOR SHARE VERSUS TESLA'S 10%, PUBLISHED ON 13 MAY 2026. WOOD MACKENZIE INSTEAD RANKED SUNGROW FIRST THROUGH A BROADER TEN-CRITERION ASSESSMENT ON 14 JULY 2026; THE APPARENT CONFLICT IS METHODOLOGICAL, SO SHIPMENT SHARE AND QUALITATIVE RANKING ARE NOT TREATED AS INTERCHANGEABLE.

COMPETITIVE POSITION - TESLA HELD 39% OF THE NORTH AMERICAN BESS-INTEGRATION MARKET IN 2024, ACCORDING TO WOOD MACKENZIE ON 7 AUGUST 2025. - SUNGROW HELD 10% IN NORTH AMERICA IN 2024 AND SHIPPED 43 GWH GLOBALLY IN 2025. - BYD HELD 13% OF GLOBAL BESS INTEGRATION IN 2025 VERSUS TESLA'S 10%, ACCORDING TO BENCHMARK MINERAL INTELLIGENCE. - CHINESE INTEGRATORS COLLECTIVELY HELD 76% GLOBALLY IN 2025, ACCORDING TO WOOD MACKENZIE ON 7 JULY 2026.

UNIT ECONOMICS MEGAPACK 3 IS APPROXIMATELY 5 MWH PER UNIT. QUOTED PRICING CONFLICTS BETWEEN USD 855,367 STANDALONE AND USD 1.3M PER UNIT; ALL-IN EPC ESTIMATES RANGE FROM USD 220 TO USD 285 PER KWH. THE REPORT DOES NOT SELECT A SINGLE REALIZED PRICE BECAUSE CONFIGURATION AND SCOPE DIFFER. TESLA'S FY2025 GROSS MARGIN OF 29.8% COMPARES WITH SUNGROW ESS AT 36.49%, WHILE FLUENCE REPORTED 5.1% IN Q3 FY2026.

ECONOMICS BRIDGE LATHROP AND SHANGHAI EACH HAVE 40 GWH ANNUAL CAPACITY, WHILE BROOKSHIRE HAS 50 GWH DESIGN CAPACITY, SUPPORTING APPROXIMATELY 130 GWH BEFORE SMALLER FACILITIES AND CLOSE TO THE CITED 133 GWH PLANNED TOTAL. US-MADE CELLS AND MODULES MAY QUALIFY FOR UP TO USD 45 PER KWH UNDER IRA SECTION 45X. AT FULL 50 GWH BROOKSHIRE OUTPUT, THE MATHEMATICAL CEILING IS USD 2.25BN OF ANNUAL CREDITS BEFORE ELIGIBILITY AND SHARING EFFECTS.

ENERGY GENERATION AND STORAGE FACT SHEET

GROWTH PROFIT ENGINE

FY2025A REVENUE	USD 12,771m
FY2025A GROSS PROFIT	USD 3,802m
FY2025 REPORTED GROSS MARGIN	29.8%
CURRENT EV ALLOCATION BASIS	$12.77bn × 12.0x revenue
FY2025 STORAGE DEPLOYMENT	46.7 GWh
GLOBAL BESS INTEGRATOR SHARE	10% in 2025
NORTH AMERICA INTEGRATOR SHARE	39% in 2024
NAMED ANNUAL CAPACITY	About 133 GWh planned
MEGAPACK 3 CAPACITY	About 5 MWh per unit
US MANUFACTURING CREDIT	Up to $45/kWh

CORE ANALYSIS · BUSINESS DIVISION DEEP DIVES

08.4 Energy Generation and Storage (continued)

Business division deep dive — Growth profit engine.

GAP TO REQUIRED ECONOMICS Q2 2026 ENERGY GROSS MARGIN FELL TO 20.4% AFTER A USD 240M WARRANTY TRUE-UP FOR LEGACY VENDOR CELLS, ACCORDING TO TESLA'S Q2 CALL AS REPORTED ON 23 JULY 2026. A RETURN TOWARD FY2025 MARGIN IS REQUIRED TO SUPPORT A 12.0X REVENUE ALLOCATION. COMPETITION ALSO HAS DENSITY ADVANTAGES: BYD'S HAOHAN OFFERS 10 MWH IN A STANDARD 20-FOOT FOOTPRINT, WHILE CATL CONFIGURATIONS REACH 9 MWH AND ITS SODIUM-ION ARCHITECTURE EXCEEDS 30 MWH.

ASSESSMENT ENERGY HAS THE STRONGEST EVIDENCE-TO-VALUE RATIO AMONG TESLA'S OPTIONAL BUSINESSES, BUT USD 153.252BN STILL DISCOUNTS SUSTAINED GROWTH AND MARGIN RECOVERY. DOMESTIC MANUFACTURING, TARIFF PROTECTION AND TAX CREDITS SUPPORT US ECONOMICS; GLOBAL COMPETITION IS MUCH HARSHER. THE VALUATION SHOULD RISE WITH CONTRACTED BACKLOG, UTILIZATION AND NORMALIZED WARRANTY COSTS, NONE OF WHICH IS FULLY DISCLOSED IN THE SOURCE DATA.

CORE ANALYSIS · CROSS-DIVISION BRIDGE

09 Putting the divisions back together

How the business division valuations aggregate to the group, and the re-rating the target price requires.

Automotive supplies the fleet, customer relationship, sensor hardware and manufacturing base for FSD. Lower vehicle prices can compress hardware gross profit while expanding the addressable subscription fleet, creating a deliberate cannibalization trade-off between present gross profit and future recurring revenue.

Energy shares battery procurement, power electronics, manufacturing expertise and capital with automotive. Scale can improve purchasing leverage, but scarce cells, engineering talent and factory investment can move between divisions. Energy's higher reported gross margin makes it an increasingly important internal funding source.

Autonomy and Optimus share AI training, inference, vision and semiconductor expenditure. That creates genuine reuse, but accounting visibility is limited: group capital expenditure rises before either option reports standalone revenue or operating profit. The followed model expects negative FCFF through FY2027E.

The allocation decision is therefore central. Management expects roughly USD 25bn of 2026 capital expenditure, while the followed model contains USD 19.354bn. The difference raises execution requirements and could delay free-cash-flow recovery unless software or energy monetization arrives sooner.

BRIDGE MECHANICS

The locked current-EV control total is allocated across divisions for interpretation, while the target price uses independently auditable consolidated EV/EBITDA and EV/EBIT methods. No positive target weight is assigned to the analytical SOTP.

At the authoritative controls, Tesla trades at 76.86x FY2026E EV/EBITDA and 225.18x EV/EBIT. The historical normalized averages are 101.83x and 191.70x, but those averages reflect years when the market repeatedly capitalized future options and should not be treated as mature-state multiples.

The resolved peer median is 9.5x FY2026E EV/EBITDA and 19.5x EV/EBIT. Toyota anchors manufacturing at 5.2x on both measures, Uber anchors mobility at 13.8x EV/EBITDA, and NVIDIA anchors AI at 34.2x. Tesla's mixed portfolio warrants a premium to the median but not the current 76.86x without much higher profit.

The reverse valuation makes the requirement explicit. FY2026E EBIT must be USD 22.567bn rather than USD 5.672bn, and FY2027E EBIT must be USD 45.476bn rather than USD 6.890bn. Revenue is unchanged in the solve, so almost all reconciliation comes from margin.

The market-implied EBITDA margin rises to 45.7% in FY2027E and approaches 49.3% by FY2034E. That is closer to an AI platform than an integrated manufacturer. NVIDIA's FY2027E EBIT margin is 65.0%, but Tesla must also carry factories, inventories, service obligations and fleet-related capital intensity.

The valuation can work if high-margin software and networks dominate profit without destroying vehicle demand. It fails if automotive remains the principal EBIT source, because even a Toyota-like margin on Tesla's revenue does not produce the required earnings.

CORE ANALYSIS · SCENARIOS & VERDICT

10 Scenario logic and the bottom-line judgment

How the conclusion changes under less favourable scenarios.

The bear case uses USD 110.0bn revenue, USD 11.0bn EBITDA and 12.0x EV/EBITDA. It assumes weaker China positioning, continued vehicle pricing pressure, energy warranty normalization that takes longer than expected and AI spending without near-term monetization.

The base case uses the followed FY2027E revenue of USD 126.2bn and EBITDA of USD 19.140bn with a 25.0x multiple. It assumes automotive stabilizes, energy retains premium economics, and software progress earns a large premium to manufacturing and mobility peers without reaching NVIDIA economics.

The bull case uses USD 145.0bn revenue, USD 29.0bn EBITDA and 35.0x. It requires faster FSD subscription and robotaxi adoption, energy capacity utilization and early Optimus commercialization. Higher EBITDA supplies more internally generated cash; the scenario bridge conservatively does not add a separate future net-cash credit beyond the locked EV-to-equity adjustments.

All three scenarios remain below the reverse valuation's FY2027E EBITDA of USD 57.726bn. The bull case is therefore operationally optimistic without simply reproducing what the current market capitalization already requires.

BOTTOM LINE

Tesla owns credible assets in vehicles, storage, software and embodied AI, but the current enterprise value is formed mainly in businesses whose standalone economics remain undisclosed. The followed forecasts support a premium valuation and still produce only USD 109.50 per share. Investors rejecting that target should focus on the measurable path: subscriptions, paid autonomous miles, permits, energy margin, next-platform cost and robotics deployment productivity.

VALUATION

Target price derivation

16

The rationale for the chosen valuation method and multiple, with the company's historical multiples.

Tesla combines a capital-intensive automotive and storage base with software, mobility and robotics options. A division-based SOTP is useful for explaining where the current enterprise value forms, but the available evidence does not provide standardized standalone EBITDA or EBIT for autonomy and robotics. It therefore receives a 0% target-price weight. The positive-weight methods use consolidated forecast metrics that can be verified directly against the authoritative model.

The primary method is FY2027E EV/EBITDA at 25.0x. The multiple is above the resolved peer median of 11.4x for FY2027E and Toyota's 2.9x, reflecting Tesla's software and AI options. It remains below NVIDIA's 15.4x only in nominal terms by less than the historical Tesla premium; relative to the mixed peer set it is deliberately generous. It is also far below Tesla's normalized historical EV/EBITDA average of 101.83x because the followed model no longer supports hypergrowth-era margins.

The secondary method is FY2028E EV/EBIT at 35.0x. It exceeds the FY2028E peer median of 11.1x and NVIDIA's 11.5x, explicitly capitalizing future autonomy, energy and robotics value. It remains well below Tesla's normalized historical EV/EBIT average of 191.70x. The 70%/30% weighting favors EBITDA because depreciation is unusually volatile across the forecast, while EBIT preserves discipline around the economic cost of the investment base.

The locked EV-to-equity bridge subtracts the net effect of net debt and other adjustments: equity value equals enterprise value minus USD 7.269bn. Sensitivity around FY2027E EBITDA shows that even a 20% EBITDA increase and a 35.0x multiple produce a value materially below the authoritative current quote, demonstrating that the disagreement is fundamentally about post-2027 profit scale rather than a narrow multiple choice.

HISTORICAL AND FORECAST MULTIPLES

VALUATION MAP

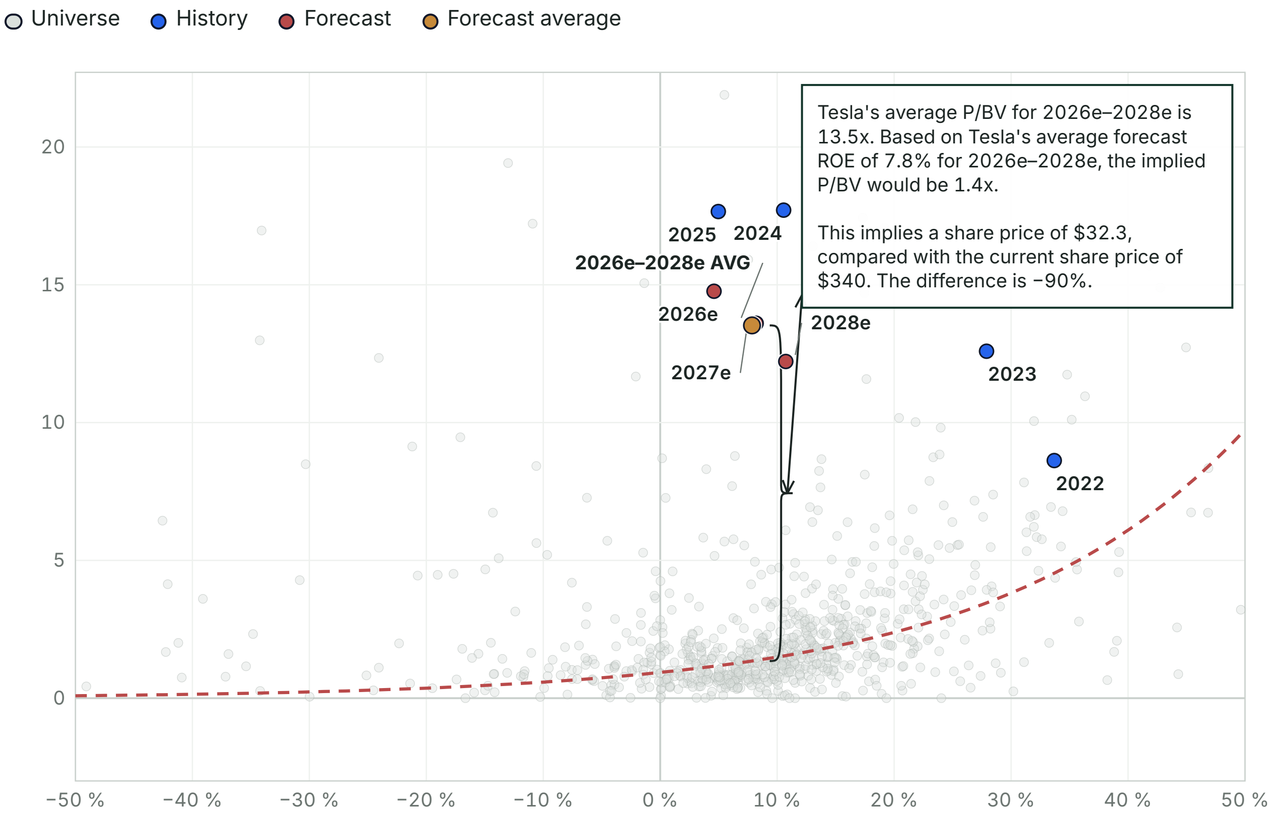
ROE vs P/BV — pricing versus profitability

18

The whole Wisdom universe as context: how the market prices profitability on average, and what the company's forecast position would imply for the share price.

ROE 2025 vs P/BV 2025

Tesla in the Wisdom universe (4 632 companies)



Tesla's average FY2026E-FY2028E ROE is 7.8% against an average P/BV of 13.5x. Across 4,632 consensus companies, the fitted curve implies only 1.4x P/BV at that ROE, or USD 32.3 per share on USD 23.9 average forecast book value per share. The roughly 90% gap to the current price quantifies how little of the valuation is explained by conventional returns on book equity.

SCENARIO VALUATION

20

Bear / Base / Bull bridge

Revenue, EBITDA, multiple, EV, equity, value-per-share and upside in each scenario.

SCENARIO BRIDGE

	REVENUE	EBITDA	MARGIN	MULTIPLE	EV	EQUITY	VALUE / SHARE	UPSIDE
Bear	110,000	11,000	10.0%	12.0×	132,000	124,731	USD 31.58	−90.7%
Base	126,200	19,140	15.2%	25.0×	478,500	471,231	USD 119.31	−64.9%
Bull	145,000	29,000	20.0%	35.0×	1,015,000	1,007,731	USD 255.15	−25.0%

KEY CONDITIONS

Bear assumes continued automotive price pressure and delayed option monetization. Base assumes FY2027E followed revenue and EBITDA with stable vehicle demand, recovering energy margin and measurable but not dominant software profit. Bull requires faster recurring-software adoption, broader autonomous permission, strong energy utilization and early robotics revenue, with the resulting higher operating cash generation funding more of the investment program. These scenarios are operating boundary cases, not probability-weighted target-price inputs. The code-verified 12-month target of USD 109.5 sits between Bear and Base (Bear USD 31.6, Base USD 119.3, Bull USD 255.2); its method weights are shown in the Target Price Bridge.

THESIS BREAKER

The downside thesis breaks if consolidated EBITDA approaches USD 30bn while autonomous permission and recurring software adoption broaden simultaneously.

CATALYSTS

21

Monitoring checklist

Near-, medium- and long-term events that could change the recommendation.

CATALYST REGISTER

	TIMING	SEGMENT	INDICATOR	VALUATION IMPACT
RDW completes European FSD review	NEAR-TERM	Autonomy, FSD and Mobility	Approval scope and EU recognition	Raises probability of international software scale
Energy gross margin normalizes after warranty true-up	NEAR-TERM	Energy Generation and Storage	Quarterly gross margin returns toward FY2025	Supports premium storage multiple
Optimus production begins after delay	NEAR-TERM	Optimus and Humanoid Robotics	Verified units and task uptime	Reduces pre-revenue execution discount
Texas robotaxi authorization and license continuity	NEAR-TERM	Autonomy, FSD and Mobility	Commercial authorization and paid miles	Validates permission-led expansion
Next-generation vehicle cost evidence	MEDIUM-TERM	Automotive Manufacturing and Services	Realized cost versus \$16k-\$20k estimates	Improves automotive margin floor
Brookshire Megafactory utilization scales	MEDIUM-TERM	Energy Generation and Storage	Output versus 50 GWh design capacity	Adds volume and domestic-credit leverage
External Optimus customer orders	LONG-TERM	Optimus and Humanoid Robotics	Price, volume and gross margin disclosure	Converts option value into operating value

READ-THROUGH

The most valuable catalysts are those that convert permission or engineering progress into auditable economics. An approval without paid utilization is insufficient; a robot deployment without uptime or labor savings is similarly incomplete. Subscription growth, paid miles, energy margin and unit cost should be read together. Timing also matters because FY2026E and FY2027E FCFF are negative in the followed model. Milestones that arrive after the heaviest investment period preserve option value but do less to reduce near-term financing and execution risk.

RISKS

Risk register

22

Each risk's business division, mechanism, early-warning trigger, impact band and structural type.

RISK REGISTER

	SEGMENT	MECHANISM	EARLY WARNING	IMPACT	TYPE
Autonomous permits fail to broaden	Autonomy, FSD and Mobility	Restricts paid deployment and delays network effects	California remains supervised or TCP-only	HIGH	STRUCTURAL
China share erosion persists	Autonomy, FSD and Mobility	Reduces vehicle gross profit and software fleet growth	Share remains near 5% and pricing falls	HIGH	THESIS BREAKER
AI capex fails to monetize	Optimus and Humanoid Robotics	Extends negative FCFF without recurring profit	Capex exceeds $25bn with flat software revenue	HIGH	THESIS BREAKER
Energy margin remains below FY2025	Energy Generation and Storage	Weakens the best evidenced non-auto profit pool	Warranty costs recur and margin stays near 20%	MEDIUM	MANAGEABLE
Next-platform cost target slips	Automotive Manufacturing and Services	Limits affordable-model margin and volume growth	No verified production date or realized unit cost	HIGH	STRUCTURAL
Optimus commercialization is delayed	Optimus and Humanoid Robotics	Pushes value further into the terminal period	Repeated production delays and no external orders	MEDIUM	MANAGEABLE
BESS price and density competition intensifies	Energy Generation and Storage	Compresses pricing despite domestic incentives	BYD and CATL win share with denser systems	MEDIUM	STRUCTURAL

READ-THROUGH

The principal risk is not a single weak vehicle quarter; it is the interaction between automotive pressure and delayed AI monetization. Automotive currently supplies the revenue base, while autonomy and robotics absorb capital before generating separately disclosed profit. Simultaneous weakness would undermine both earnings and option value. Energy provides diversification but is exposed to warranty costs, Chinese system density and pricing. A combination of persistent China share erosion, autonomous permit delays and capital expenditure above USD 25bn without recurring revenue would be thesis-breaking even if reported revenue continued to grow.
